Chapitre 1

Réseaux - lab 1

Question 1

(a)

$$P(\%) = f(m, p, h_1, h_2, h_3) = \frac{m}{\frac{8*2p}{3}h_1 + \frac{8*p}{6}h_2 + \frac{8*p}{6}h_3 + m} 100\%$$

(b) En assumant que le meme nombre de couches qui ajoutent h_3 reste le même qu'à la question a) :

$$P(\%) = f(m, p, h_1, h_2, h_3, h_4) = \frac{m}{\frac{8*2p}{3}h_1 + \frac{8*p}{6}h_2 + \frac{8*p}{6}h_3 + \frac{8*p}{6}h_4 + m} 100\%$$

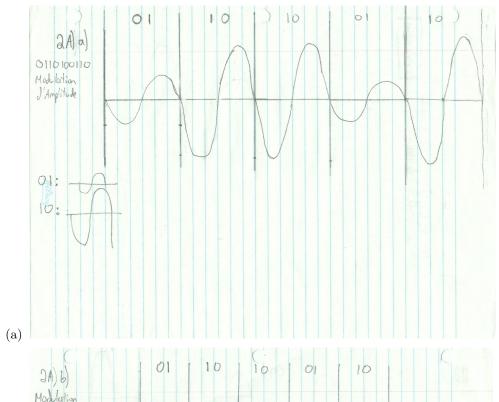

En assumant que le nombre de couches qui ajoutent h_3 est le nombre de couches restantes :

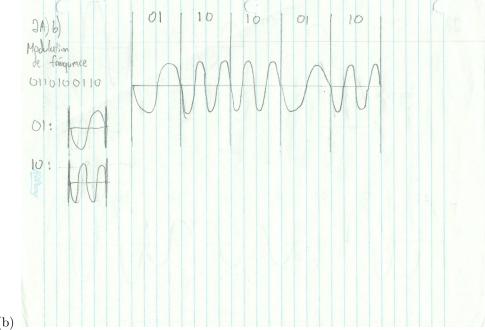

$$P(\%) = f(m, p, h_1, h_2, h_3, h_4) = \frac{m}{\frac{8*2p}{3}h_1 + \frac{8*p}{6}h_2 + 0h_3 + \frac{8*p}{6}h_4 + m} 100\%$$

(c)

$$P(\%) = f(16000, 6, 128, 256, 0, 64) = \frac{16000}{\frac{8*2*6}{3}128 + \frac{8*6}{6}256 + \frac{8*6}{6}64 + 16000)}100\% = 70.62\%$$

Question 2A

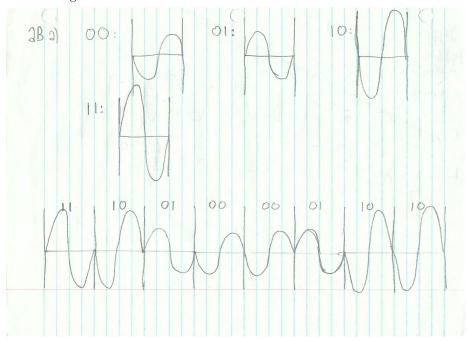

Question 2B

(a)

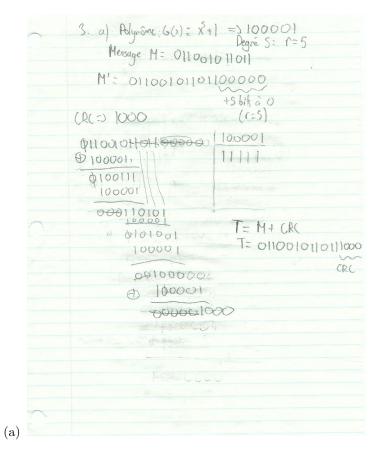

$$R_m = 1500$$

$$D=R_m\log_2V=1500\log_24=3000bits/sec$$

Ou V est égale au nombre de valeurs

Question3

Question 4

- (a) utilisation max du canal = $\frac{1000bits}{2*0.250s} = 2000\frac{bits}{s}$
- (b) $W = 2^n 1 = 2(3bits) 1 = 7trames$ utilisation max du canal = $\frac{7*1000bits}{2*0.250s} = 14000\frac{bits}{s}$
- (c) $W = 2^n 1 = 2^{(3bits)} 1 = 7trames$ utilisation max du canal = $\frac{7*1000bits}{2*0.250s} = 14000 \frac{bits}{s}$
